Introduction

This report presents the results of the October 1, 2023 actuarial valuation for the Employee Pension Plan of the City of Frostproof, Florida. The report is based on the participant data and asset information provided by the pension plan administrator and, except for a cursory review for reasonableness including a comparison to the data provided for the previous valuation, we have not attempted to verify the accuracy of this information.

The primary purpose of this report is to provide a summary of the funded status of the plan as of October 1, 2023 and to determine the minimum required contribution under Chapter 112, Florida Statutes, for the 2023/24 plan year. In addition, this report provides a projection of the long-term funding requirements of the plan, statistical information concerning the assets held in the trust, statistical information concerning the participant population, and a summary of any recent plan changes.

The liabilities and cost presented in this report are based on numerous assumptions concerning the cost of benefits to be provided in the future, long-term investment returns, and the future demographic experience of the current participants. Anyone referring to this report should remember that the cost developed herein is only an *estimate* of the true cost of providing post-employment pension benefits. No one can predict with certainty whether the true cost will be higher or lower than the cost presented in this report. The calculated cost is entirely dependent upon the assumptions that are described in Table IV-A. If any of the assumptions is changed, then the cost shown in this report will change accordingly. Likewise, if any of the assumptions is not completely realized, then the cost shown in this report will change in the future.

Certain assumptions play a bigger role than others in determining the cost of the post-employment pension benefits. In some cases, relatively small changes in a particular assumption can have a dramatic impact on the anticipated cost of benefits. Although a thorough analysis of the impact of such changes is beyond the scope of this report, Table I-B illustrates the impact that alternative long-term investment returns would have on the normal cost rate.

Minimum Required Contribution

Table I-A shows the development of the minimum required contribution for the 2023/24 plan year. The minimum required contribution rate is 13.24% of covered payroll, which represents an increase of 2.82% of payroll from the prior valuation.

The normal cost rate is 12.78%, which is 2.72% of payroll greater than the normal cost rate that was developed in the prior valuation. Table I-C provides a breakdown of the sources of change in the normal cost rate. Significantly, the rate decreased by 0.51% of payroll due to investment gains and increased by 3.23% of payroll due to demographic experience. The market value of assets earned 8.54% during the 2022/23 plan year, whereas a 7.00% annual investment return was required to maintain a stable contribution rate.

Chapter 112, Florida Statutes, sets forth the rules concerning the minimum required contribution for public pension plans within the state. Essentially, the City must contribute an amount equal to the annual normal cost of the plan plus an adjustment as necessary to reflect interest on any delayed payment of the contribution beyond the valuation date. On this basis, the City's 2023/24 minimum required contribution will be equal to 13.24% multiplied by the total pensionable earnings for the 2023/24 fiscal year for the active employees who are covered by the plan.

Based on the current assets, participant data, and actuarial assumptions and methods that are used to value the plan, the present-day value of the total long-term funding requirement is \$2,835,402. As illustrated in Table I-A, current assets are sufficient to cover \$1,783,670 of this amount, the employer's 2023/24 contribution is expected to cover \$78,614 of this amount, and future employee contributions are expected to cover \$295,710 of this amount, leaving \$677,408 to be covered by future employer contributions after the 2023/24 plan year. Again, demographic and investment experience that differs from that assumed will either increase or decrease the future employer funding requirement.

Employee Contribution Rate

The plan provides that the employees may be required to contribute from 1% to 10% of pensionable earnings. It is our understanding that the City has adopted a 5% employee contribution rate as of October 1, 2023.

Identification and Assessment of Risk

The liabilities and cost presented in this report are based on numerous assumptions concerning the cost of benefits to be provided in the future, long-term investment returns, and the future demographic experience of the current participants. Anyone referring to this report should remember that the cost developed herein is only an *estimate* of the true cost of providing post-employment pension benefits. No one can predict with certainty whether the true cost will be higher or lower than the cost presented in this report. The calculated cost is entirely dependent upon the assumptions that are described in Table IV-A. If any of the assumptions is changed, then the cost shown in this report will change accordingly. Likewise, there is always a risk that, should these assumptions not be realized, the liabilities of the plan, the contributions required to fund the plan, and the funded status of the plan may be significantly different than the amounts shown in this report.

Although a thorough analysis of the risk of not meeting the assumptions is beyond the scope of this report, this discussion is intended to identify the significant risks faced by the plan. In some cases, a more detailed review of the risks, including numerical analysis, may be appropriate to help the plan sponsor and other interested parties assess the specific impact of not realizing certain assumptions. For example, Table I-B illustrates the impact that alternative long-term investment returns would have on the contribution rate. Note that this report is not intended to provide advice on the management or reduction of the identified risks nor is this report intended to provide investment advice.

The most significant risk faced by most defined benefit pension plans is investment risk, i.e. the risk that long-term investment returns will be less than assumed. Other related risks include a risk that, if the investments of the plan decline dramatically over a short period of time (such as occurred with many pension plans in 2008), the plan's assets may not have sufficient time to recover before benefits become due. Even if the assets of the plan grow in accordance with the

assumed investment return over time, if benefit payments are expected to be large in the short-term (for example, if the plan provides an actuarial equivalent lump sum payment option and a large number of participants are expected to become entitled to such a lump sum in the near future), the plan's assets may not be sufficient to support such a high level of benefit payments. We have provided a 10-year projection of the expected benefit payments in Table III-G to help the Trustees in formulating an investment policy that is expected to provide an investment return that meets both the short- and long-term cash flow needs of the pension plan.

Another source of risk is demographic experience. This is the risk that participants will receive salary increases that are different than the amount assumed, that participants will retire, become disabled, or terminate their employment at a rate that is different than assumed, and that participants will live longer than assumed, just to cite a few examples of the demographic risk faced by the plan. Although for most pension plans, the demographic risk is not as significant as the investment risk, particularly in light of the fact that the mortality assumption includes a component for future life expectancy increases, the demographic risk can nevertheless be a significant contributing factor to liabilities and contribution rates that become higher than anticipated.

A third source of risk is the risk that the plan sponsor (or other contributing entities) will not make, or will not have the ability to make, the contributions that are required to keep the plan funded at a sufficient level. Material changes in the number of covered employees, covered payroll, and, in some cases, hours worked by active participants can also significantly impact the plan's liabilities and the level of contributions received by the plan.

Finally, an actuarial funding method has been used to allocate the gap between projected liabilities and assets to each year in the future. The contribution rate under some funding methods is higher during the early years of the plan and then is lower during the later years of the plan. Other funding methods provide for lower contribution rates initially, with increasing contribution rates over time.

The Trustees have adopted the aggregate funding method for this plan, which is expected to result in a contribution rate that is level as a percentage of payroll over the working life of the plan's active participants. A brief description of the actuarial funding method is provided in Table IV-A.

Contents of the Report

Tables I-D through I-G provide a detailed breakdown of various liability amounts by type of benefit and by participant group. Tables II-A through II-F provide information concerning the assets of the trust fund. Specifically, Table II-A shows the development of the actuarial value of assets, which is based on the market value of assets, adjusted to reflect the advance employer contribution. Tables III-A through III-G provide statistical information concerning the plan's participant population. In particular, Table III-G gives a 10-year projection of the cash that is expected to be required from the trust fund in order to pay benefits to the current group of participants. Finally, Tables IV-A through V-B provide a summary of the actuarial assumptions and methods that are used to value the plan's benefits and of the relevant plan provisions as of October 1, 2023, as well as a summary of the changes that have occurred since the previous valuation report was prepared.

Certification

This actuarial valuation was prepared by me or under my direct supervision and I acknowledge responsibility for the results. To the best of my knowledge, the results are complete and accurate and, in my opinion, the techniques and assumptions used are reasonable and meet the requirements and intent of Chapter 112, Florida Statutes. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material change in plan costs or required contribution rates have been taken into account in the valuation.

| For the period October 1, 2031 through September 30, 2032 | \$155,787 |
| For the period October 1, 2032 through September 30, 2033 | \$163,555 |

Summary of Actuarial Methods and Assumptions

Table IV-A

NOTE: The following assumptions and methods have been selected and approved by the Board of Trustees based in part on the advice of the plan's enrolled actuary in accordance with the authority granted to the Board under the pension ordinances and State law.

1. Actuarial Cost Method

Aggregate cost method. Under this actuarial cost method, a funding cost is developed for the plan as a level percentage of payroll. The level funding percentage is calculated as the excess of the total future benefit liability over accumulated assets and future employee contributions, with this excess spread over the expected future payroll for current active participants. The normal cost is equal to the level funding percentage multiplied by the expected payroll for the year immediately following the valuation date. The actuarial accrued liability is equal to the accumulated assets. Therefore, under the aggregate cost method, no unfunded accrued liability is developed.

2. Asset Method

The actuarial value of assets is equal to the market value of assets.

3. Interest (or Discount) Rate

7.00% per annum

4. Salary Increases

Plan compensation is assumed to increase at the rate of 5.50% per annum, unless actual plan compensation is known for a prior plan year. In addition, average monthly earnings have been loaded by 2.50% to account for accumulated sick leave and vacation payments upon termination of employment.

5. Decrements

- Pre-retirement mortality: Sex-distinct rates set forth in the PUB-2010 Headcount-Weighted Below Median Employee Mortality Table for general employees, with full generational improvements in mortality using Scale MP-2018 and with male ages set back one year
- Post-retirement mortality: Sex-distinct rates set forth in the PUB-2010 Headcount-Weighted Below Median Healthy Retiree Mortality Table for general employees, with full generational improvements in mortality using Scale MP-2018 and with male ages set back one year

Summary of Actuarial Methods and Assumptions

Table IV-A

(continued)

- Disability: Age-based rates of disability were assumed, ranging from 0.03% at age 20 to 0.80% at age 60; no disabilities are assumed to be service-related.
- Termination: With respect to participants with less than seven years of service, the termination rates are service-based, ranging from 8.70% for participants with less than one year of service to 6.00% for participants with between six and seven years of service; with respect to participants with at least seven years of service, the termination rates are age-based, ranging from 5.40% at age 20 to 0.00% at age 60.
- Retirement: 20% of eligible participants are assumed to retire at age 62, 10% of eligible participants are assumed to retire at each of ages 63 and 64, and 100% of eligible participants are assumed to retire at age 65.

6. Form of Payment

Future retirees have been assumed to select the single life annuity.

7. Expenses

The total projected benefit liability has been loaded by 4.50% to account for anticipated administrative expenses. In addition, the interest rate set forth in item 3. above is assumed to be net of investment expenses and commissions.

Changes in Actuarial Methods and Assumptions

Table IV-B

No assumptions or methods were changed since the completion of the previous valuation.

The following additional assumption and method changes were made during the past 10 years:

- (1) Effective October 1, 2020, the mortality basis was changed from the RP-2000 Combined Mortality Table with generational improvements in mortality using Scale BB to selected PUB-2010 Mortality Tables with generational improvements in mortality using Scale MP-2018.*
- (2) Effective October 1, 2017, the interest (or discount) rate was decreased from 7.25% per annum to 7.00% per annum.*
- (3) Effective October 1, 2016, the mortality basis was changed from a 2007 projection of the RP-2000 Mortality Table for annuitants to a full generational projection using Scale BB of the RP-2000 Combined Mortality Table as required by State law.*

Summary of Plan Provisions

Table V-A

1. Monthly Accrued Benefit

2.50% of Final Monthly Compensation multiplied by Credited Service

2. Normal Retirement Age and Benefit

- **Age**
Age 65 with at least 10 years of Vested Service
- **Amount**
Monthly Accrued Benefit
- **Form of Payment**
Single life annuity (normal form of payment);
Actuarially reduced certain and life annuity (optional);
Actuarially reduced joint and contingent annuity with 50% to 100% of the benefit payable to the participant's spouse for life after the participant's death (optional);
Actuarially equivalent series of fixed monthly installments (optional); or
Actuarially equivalent lump sum distribution (automatic if the single sum value of the participant's benefit is less than or equal to \$3,500)

3. Early Retirement Age and Benefit

- **Age**
Age 55 with at least 10 years of Vested Service
- **Amount**
Monthly Accrued Benefit (payable at Normal Retirement Age); or
Actuarial Equivalent of the Monthly Accrued Benefit (payable at Early Retirement Age)
- **Form of Payment**
Same as for Normal Retirement

4. Delayed Retirement Age and Benefit

- **Age**
After Normal Retirement Age
- **Amount**
Monthly Accrued Benefit
- **Form of Payment**
Same as for Normal Retirement

Summary of Plan Provisions

Table V-A

(continued)

5. Disability Eligibility and Benefit**• Eligibility**

All participants are eligible.

• Condition

A licensed physician selected by the Trustees must find that the participant is wholly prevented from engaging in any occupation for wage or profit and that he is likely to remain so disabled on a continuous and permanent basis.

• Amount Payable

A monthly single life annuity equal to the Actuarial Equivalent of the Monthly Accrued Benefit which would otherwise be payable at Normal Retirement Age

6. Deferred Vested Benefit**• Age**

Any age with at least five years of Vested Service

• Amount

Monthly Accrued Benefit multiplied by the Vested Percentage (payable at Normal Retirement Age); or Actuarial Equivalent of the Monthly Accrued Benefit multiplied by the Vested Percentage (payable at Early Retirement Age)

• Form of Payment

Same as for Normal Retirement

7. Pre-Retirement Death Benefit

In the case of the death of a participant prior to retirement, his beneficiary will receive the participant's Monthly Accrued Benefit reduced actuarially as if the participant had elected to retire on his date of death. This benefit is payable as a five-year certain monthly annuity beginning as of the first day of the month following the participant's date of death. In lieu of receiving the five-year certain annuity, the beneficiary may elect to receive an actuarially equivalent single lump sum payment.

8. Final Monthly Compensation

Average of the highest five consecutive plan years of Compensation out of the last 10 plan years of employment

Summary of Plan Provisions

Table V-A

(continued)

9. Compensation

Compensation includes regular earnings and overtime payments, but excludes bonuses, commissions, expense allowances, and all other extraordinary compensation; annual compensation in excess of \$200,000 (as indexed) is excluded in accordance with Internal Revenue Code (IRC) §401(a)(17).

10. Credited Service

Years and completed months of employment, to a maximum of 30 years

11. Vested Service

Plan years during which the participant earns at least 1,000 hours of service

12. Vested Percentage

50% for participants who have earned at least five years of vested service; 60% for participants who have earned at least six years of vested service; 70% for participants who have earned at least seven years of vested service; 80% for participants who have earned at least eight years of vested service; 90% for participants who have earned at least nine years of vested service; or 100% for participants who have earned at least 10 years of vested service

13. Participation Requirement

All employees of the City of Frostproof, Florida, automatically become a participant in the plan on the one-year anniversary of their date of hire, other than firefighters, police officers, and those employees who work less than 20 hours per week or less than five hours per day.

14. Accumulated Contributions

The Employee Contributions accumulated with interest at the rate of 5% per annum; if the participant terminates his employment with less than 10 years of Credited Service, he receives his Accumulated Contributions in lieu of any other benefits payable from the plan.

Summary of Plan Provisions

Table V-A

(continued)

15. Participant Contribution

1.00% of pensionable earnings (*may be increased to as much as 10.00% of pensionable earnings*); it is our understanding that the participant contribution rate is 5.00% as of the valuation date.

16. Definition of Actuarially Equivalent

- **Interest Rate**
8.00% per annum
- **Mortality Table (Applied Only After Retirement Age)**
1984 Uninsured Pensioner (UP-84) Mortality Table

17. Plan Effective Date

October 1, 1985

Summary of Plan Amendments

Table V-B

No plan changes were adopted since the completion of the previous valuation.

The following additional plan amendments were adopted during the past 10 years and were reflected in prior valuation reports:

- (1) Effective April 20, 2020, the benefit formula multiplier was increased from 1.50% to 2.50%; (Ordinance 2020-04A)*
- (2) Effective April 20, 2020, the employee contribution rate is allowed to be increased from 1.00% of pensionable earnings to as much as 10.00% of pensionable earnings. (Ordinance 2020-04A)*
- (3) Effective January 8, 2018, a graded vesting schedule was added for those participants who have earned between five and 10 years of vested service. (Ordinance 2017-14)*
