### Introduction

This report presents the results of the October 1, 2018 actuarial valuation for the City of Parkland Police Officers Retirement Plan. The report is based on the participant data and asset information provided by the pension plan administrator and, except for a cursory review for reasonableness including a comparison to the data provided for the previous valuation, we have not attempted to verify the accuracy of this information.

The primary purpose of this report is to provide a summary of the funded status of the plan as of October 1, 2018 and to determine the minimum required contribution under Chapter 112, Florida Statutes, for the 2018/19 plan year. In addition, this report provides a projection of the long-term funding requirements of the plan, statistical information concerning the assets held in the trust, statistical information concerning the participant population, and a summary of any recent plan changes.

The liabilities and cost presented in this report are based on numerous assumptions concerning the cost of benefits to be provided in the future, long-term investment returns, and the future demographic experience of the current participants. Anyone referring to this report should remember that the cost developed herein is only an *estimate* of the true cost of providing post-employment pension benefits. No one can predict with certainty whether the true cost will be higher or lower than the cost presented in this report. The calculated cost is entirely dependent upon the assumptions that are described in Table IV-A. If any of the assumptions is changed, then the cost shown in this report will change accordingly. Likewise, if any of the assumptions is not completely realized, then the cost shown in this report will change in the future.

Certain assumptions play a bigger role than others in determining the cost of the post-employment pension benefits. In some cases, relatively small changes in a particular assumption can have a dramatic impact on the anticipated cost of benefits. Although a thorough analysis of the impact of such changes is beyond the scope of this report, Table I-B illustrates the impact that alternative long-term investment returns would have on the normal cost rate.

### Minimum Required Contribution

Table I-A shows the development of the minimum required contribution for the 2018/19 plan year. The minimum required contribution is \$63,872, which represents a decrease of \$19,234 from the prior valuation.

Table I-C provides a breakdown of the sources of change in the minimum required contribution. Significantly, the minimum required contribution increased by \$5,178 due to investment losses, decreased by \$18,382 due to a change in the expected amortization payments, decreased by \$830 due to demographic experience, and decreased by another \$5,200 due to the assumption change that is described below. The market value of assets earned 5.49% during the 2017/18 plan year, whereas a 6.50% annual investment return was required to maintain a stable contribution rate.

Chapter 112, Florida Statutes, sets forth the rules concerning the minimum required contribution for public pension plans within the state. Essentially, the City must contribute an amount equal to the annual normal cost of the plan plus an adjustment as necessary to reflect interest on any delayed payment of the contribution beyond the valuation date. On this basis, the City's 2018/19 minimum required contribution will be equal to \$63,872 and reduced by the portion of the Chapter 175/185 contribution that is allowed to be recognized during the 2018/19 plan year. As of the date of this report, the allowable portion of the Chapter 175/185 contribution is \$69,006 per year. However, this amount is subject to change depending on the amount of the Chapter 175/185 contribution for the 2018/19 plan year.

Based on the current assets, participant data, and actuarial assumptions and methods that are used to value the plan, the present-day value of the total long-term funding requirement is \$2,495,908 without regard to future administrative expenses. As illustrated in Table I-A, current assets are sufficient to cover \$2,250,481 of this amount and the employer's 2018/19 expected contribution will cover \$63,872 of this amount, leaving \$181,555 to be covered by future employer funding beyond the 2018/19 fiscal year. Again, demographic and investment experience that differs from that assumed will either increase or decrease the future employer funding requirement.

### Contents of the Report

Tables I-D through I-H provide a detailed breakdown of various liability amounts by type of benefit and by participant group. Tables II-A through II-F provide information concerning the assets of the trust fund. Tables III-A through III-D provide statistical information concerning the plan's participant population. In particular, Table III-D gives a 10-year projection of the cash that is expected to be required from the trust fund in order to pay benefits to the current group of participants. Finally, Tables IV-A and IV-B provide a summary of the actuarial assumptions and methods that are used to value the plan's benefits as of October 1, 2018, as well as a summary of the changes that have occurred since the previous valuation report was prepared.

### Assumption Change

Since the completion of the previous valuation, the assumed administrative expenses have been decreased from \$30,000 per year to \$25,000 per year.

### Certification

This actuarial valuation was prepared by me or under my direct supervision and I acknowledge responsibility for the results. To the best of my knowledge, the results are complete and accurate and, in my opinion, the techniques and assumptions used are reasonable and meet the requirements and intent of Chapter 112, Florida Statutes. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material change in plan costs or required contribution rates have been taken into account in the valuation.

## Summary of Actuarial Methods and Assumptions

Table IV-A

*NOTE: The following assumptions and methods have been selected and approved by the Board of Trustees based in part on the advice of the plan's enrolled actuary in accordance with the authority granted to the Board under the pension ordinances and State law.*

**1. Actuarial Cost Method**

Individual entry age normal cost method (nominally)

**2. Amortization Method**

The unfunded accrued liability has been amortized as a level-dollar payment; experience gains and losses are amortized over a five-year period and assumption changes are amortized over a 10-year period.

**3. Asset Method**

The actuarial value of assets is equal to the market value of assets.

**4. Interest (or Discount) Rate**

6.50% per annum

**5. Decrements**

- Post-retirement mortality: Sex-distinct rates set forth in the RP-2000 Combined Mortality Table, with full generational improvements in mortality using Scale BB

**6. Expenses**

Administrative expenses payable from the plan have been assumed to be \$25,000 per year. In addition, the interest rate set forth in item 3. above is assumed to be net of investment expenses and commissions.

## Changes in Actuarial Methods and Assumptions

## Table IV-B

Since the completion of the previous valuation, the assumed administrative expenses were decreased from \$30,000 per year to \$25,000 per year.

*The following additional assumption and method changes were made during the past 10 years:*

- (1) Effective October 1, 2017, the interest (or discount) rate was decreased from 7.00% per annum to 6.50% per annum.*
- (2) Effective October 1, 2017, the assumed administrative expenses were decreased from \$35,000 per year to \$30,000 per year.*
- (3) Effective October 1, 2016, the mortality basis was changed from a 2015 projection of the RP-2000 Mortality Table for annuitants to a full generational projection using Scale BB of the RP-2000 Combined Mortality Table as required by State law.*
- (4) Effective October 1, 2016, the assumed administrative expenses were increased from \$25,000 per year to \$35,000 per year.*
- (5) Effective October 1, 2013, the mortality basis was changed from the RP-2000 Mortality Table for annuitants, projected to 2007 by Scale AA, to the RP-2000 Mortality Table for annuitants, projected to 2015 by Scale AA, both as published by the Internal Revenue Service (IRS) for purposes of Internal Revenue Code (IRC) section 430.*
- (6) Effective October 1, 2012, the administrative expense assumption was reduced from \$40,000 per year to \$25,000 per year.*
- (7) Effective October 1, 2011, the administrative expense assumption was changed from 50% of covered payroll to \$40,000 per year.*
- (8) Effective October 1, 2010, the amortization period for experience gains and losses was decreased from 10 years to five years.*
- (9) Effective October 1, 2009, the administrative expense assumption was changed from a 7.50% loading of all costs and liabilities to 50.00% of covered payroll.*
